## PROJECTS INFORMATION

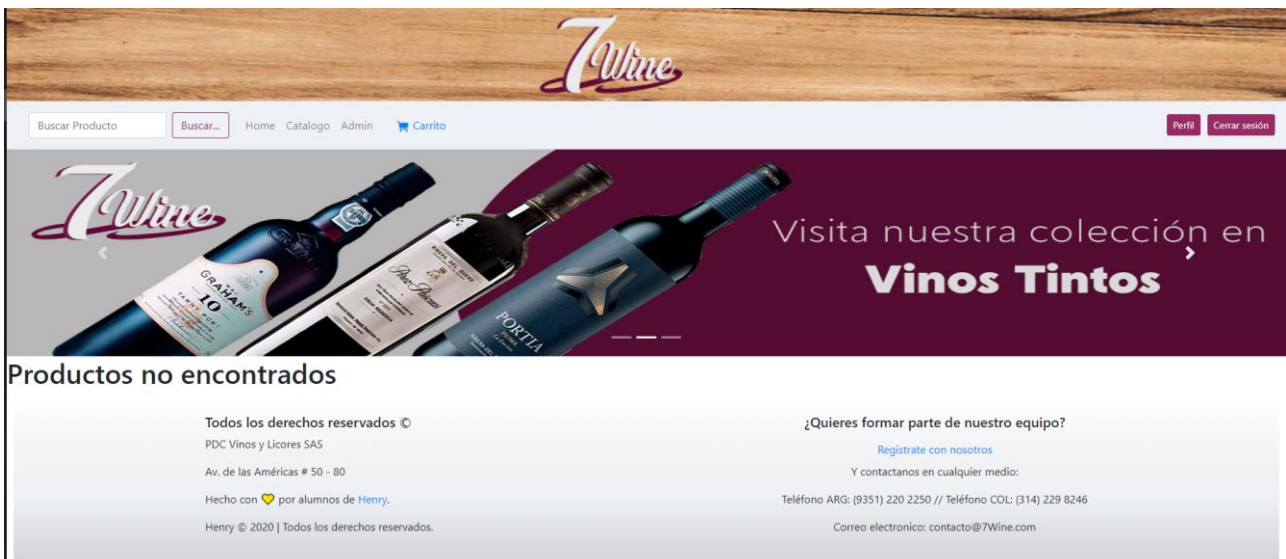

### WEATHER APP

I developed a functional weather app that allows you to check the weather for any city and you get the min – max and an icon with the actual wind situation. For this app I used React.js

### E - COMMERCE

We developed a functional e-commerce using Sequelize, Express.js, Javascript, React-Redux, PostgreSQL. In the front area I developed the user interface, gallery and admin CRUD using react-redux I did the role management from user to admin and vice versa. In the back area I created the user model, made the relations and set up the routes for the user and shopping cart, I used Sequelize ORM, PostgreSQL and Postgres to test it. I also managed the connection back-front using Axios.

## MERCADOLIBRE API

I developed a functional app to check prices, condition, stock and photos using the ML free API. I used React-redux to manage the front part and Node.js to manage the back area.

## TIC-TAC-TOE

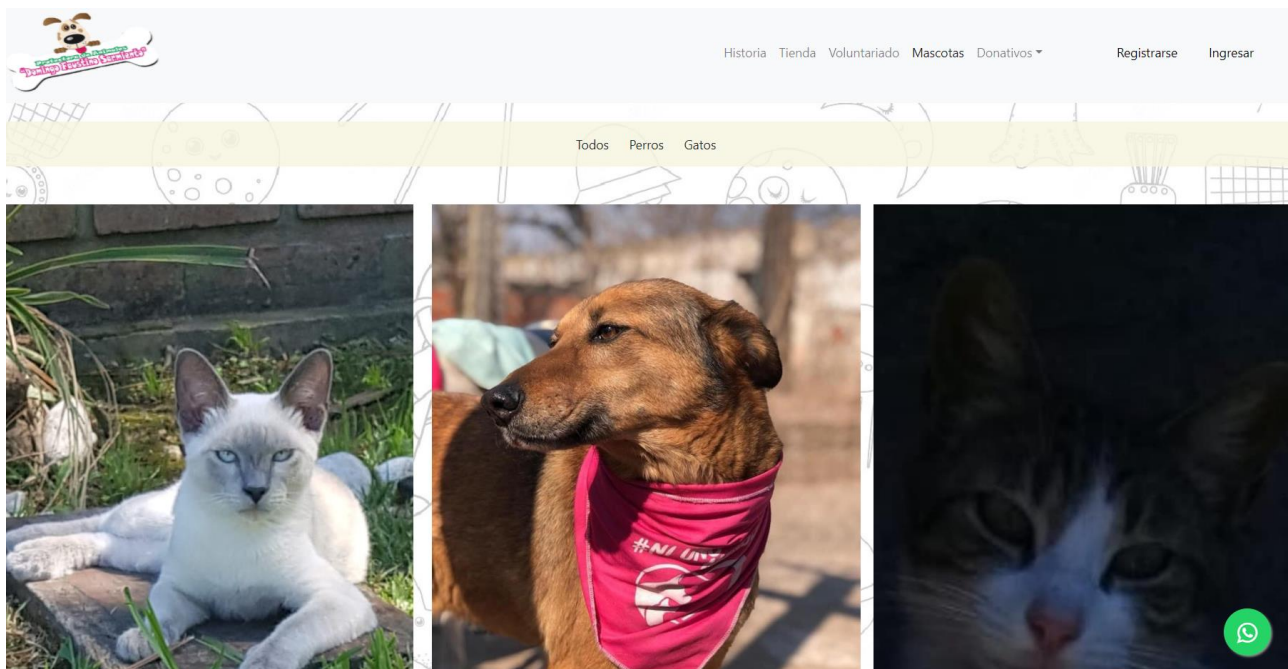

I developed a functional tic-tac-toe game and deployed the app using github-pages. I used React to create the app and gh-pages to deploy the app. You can check it in <https://acarvajal905.github.io/react-tic-tac-toe>

## PROTECTORA SARMIENTO (IN PROGRESS)

We are developing an app for a non-profit organization that works with homeless dogs and cats. I am making the front part of the app including the gallery, donations screen, navbar and adoption forms. I used React in the app, the back area uses Firebase as database.
